RETAINING WALL BLOCKS

block width: 16"

block height: 6"

Lip depth: 3/4"

**Our patented Random Stone Retaining Wall System** consists of eight randomly faced, multi-colored blocks, all 16" wide by 6" high and 12" deep. Each block weighs 60 lbs. and has a 3/4" lip on the back to ensure proper set-back and to lock the block in place. The system includes 3" top caps, and two-sided corner blocks for the wall's details.

The innovative locking lip on the back of each block allows the wall to be curved to the inside or outside. Use of the corner block supports 90° turns and permits stairs to be built into the wall.

**Random Stone Retaining Wall Systems** are crafted with care for assurance of durability and unrivaled overall product quality and appeal to meet your landscaping needs.

**Random Stone Retaining Wall blocks** are protected by U.S. Patents US D522,668 S; US D530,435 S; and US D530,830 S

**Important Notice:** Maximum height is four feet for an unreinforced Random Stone Wall. Wall height may be limited to less, dependent upon individual site considerations. Installation of walls in excess of four feet height requires engineering support and geosynthetic material basing. Your local supplier can assist you with guidelines for any site, soil, or local construction requirements.
